

between 752px - 768px width the search boxes get slightly offset

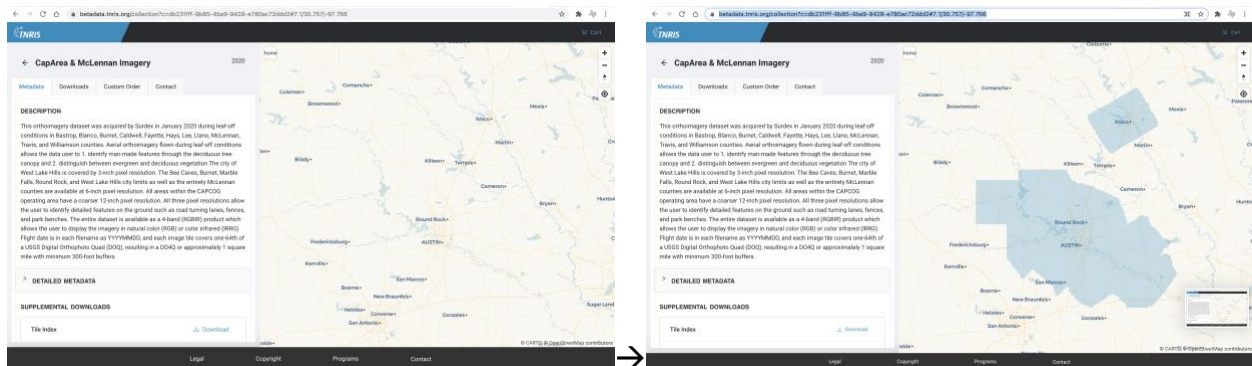

I would make the Home button just a little wider so the text isn't running right into the borders. Also would capitalize the "H". It seems like other buttons use Title Case, so "home" being lowercase feels a little out of place.

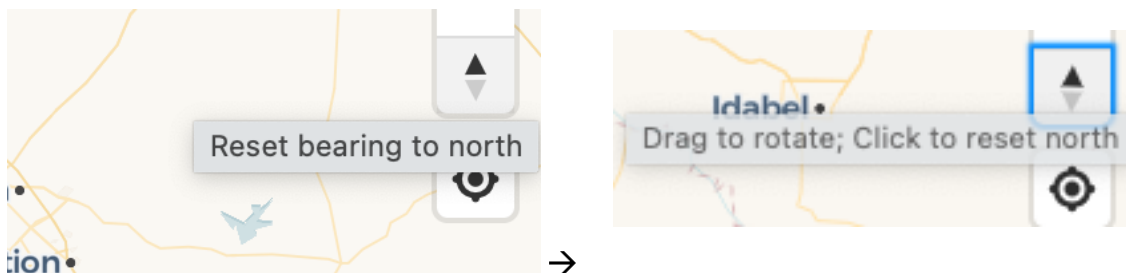

I also considered that "Home" could be confused with re-directing the users to the data.tnris.org home page...I'm just not sure what would be better. Maybe an outline of Texas...but that might confuse users to thinking they can click that and change to other states. Ultimately "Home" might be the best option, but it could be worth exploring if there are any alternatives.

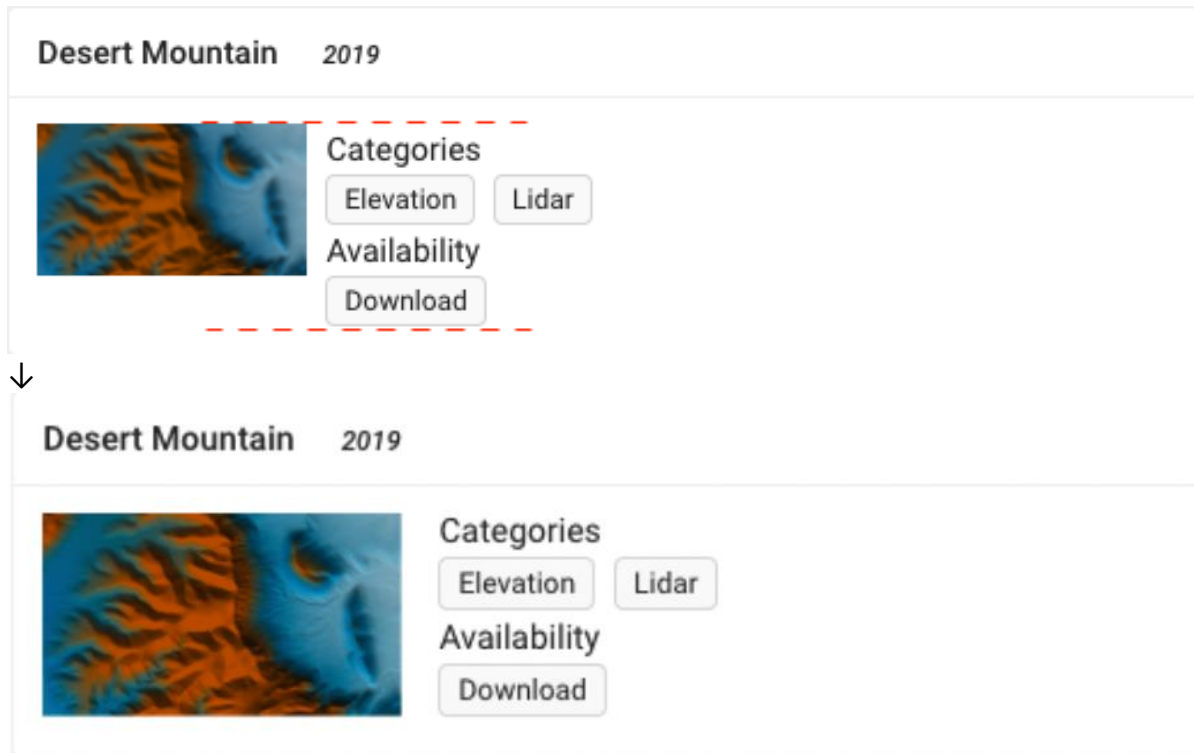

Capitalize “Show Map” to match Title Case used other places (same as above)

The footer feels a little large on smaller screens. I played with setting font to 12px and decreased the footer height by 10px. I think it’s still readable and helps free up a *little* more space.

It took me a little while to figure out what this button did. Maybe this functionality is common for this icon with map services, in which case you can ignore this, but it may be helpful to alter the text of this label. Something like “Drag to rotate; Click to reset north”

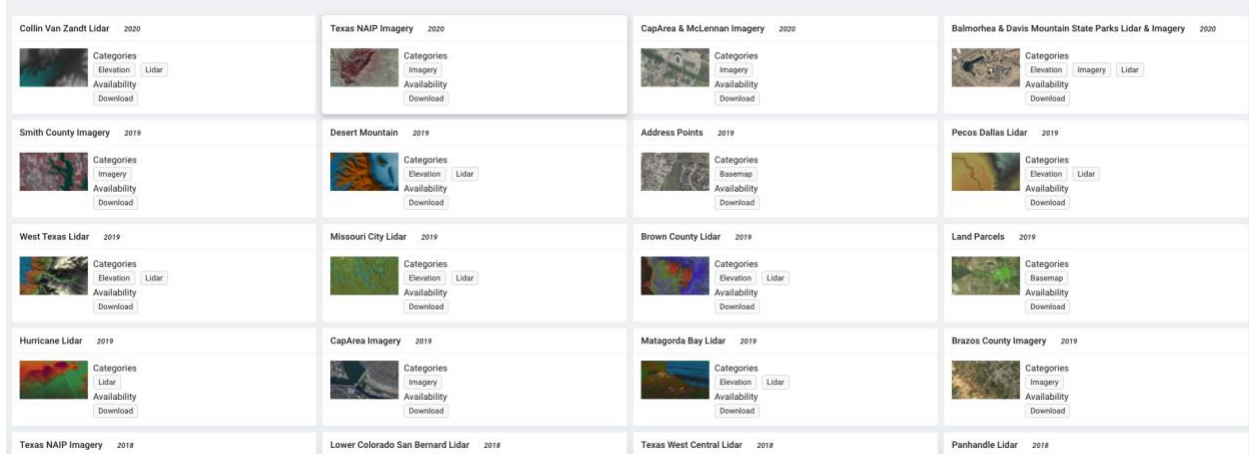

Text being aligned with picture looks a bit cleaner. Pictures could be a bit bigger to eliminate some white space

*This isn't shown in my example above but now that I'm looking at it more, it might also help to have just a little more space between the two sections—a few more px of padding between the bottom of the "Elevation" tag and the top of "Availability" text. "Categories" and "Availability" font sizes could maybe be a little smaller too if we don't want to stretch the boxes anymore vertically.

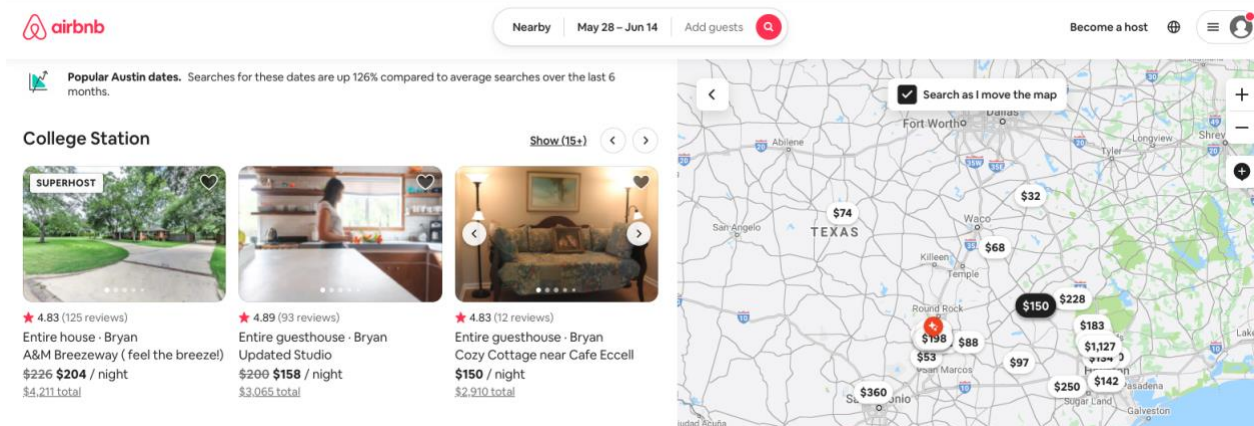

Might be easier to see if Cart text / icon were white

Collection cards have a lot of empty white space—might make sense to allow up to 5 columns

**This last part is maybe more something to consider for a future enhancement. While looking at some of our inspirations for this re-design (Airbnb, Redfin) I think we've done a great job of mimicking the UI. One thing those have is a few uses of color that make them "pop" a bit more:

REDFIN Austin 1-844-759-7732 Buy Sell Mortgage Real Estate Agents Feed Log In Sign Up

Price Property type Beds Baths Size More Filters Save Search

Austin Homes for Sale See Market Insights
41 of 956 homes Sort: Recommended Photos Table

REDFIN OPEN SAT. 12PM TO 2PM 3D WALKTHROUGH
\$500,000 4 Beds 2.5 Baths 2,339 Sq. Ft.

LISTED BY REDFIN 3D WALKTHROUGH
\$775,000 3 Beds 2 Baths 2,294 Sq. Ft.

A lot of this is due to the larger image sizes. I think we could increase the images a little bit to eliminate some of the extra white space, but our images probably don't have as much value to the information contained in the collection as pictures of houses do to someone looking to buy/rent.

Maybe we could make the "Categories" and/or "Availability" tags colored (similar to how the "3D Walkthrough" tag is colored on the Redfin example) or even just have a colored outline. I don't think this is that important and doesn't need to be a focus for our first round of testing. It might even end up looking too busy if we have too many different colors, but might something we look at adding later on.

Could also make the search button blue to add just a little more color
